2 Sprint #4 - Covid API Data

https://covid19-api.vost.pt/

HTML CODES

https://developer.mozilla.org/pt-BR/docs/Web/HTTP/Status

Usage of * resquests * pandas * graphics * functions * widgets

Objectives 1. From COVID API import data using funcions and requests 1. Convert ['confirmados_novos', 'internados', 'internados_uci'] to pandas 1. Describe ['confirmados_novos', 'internados', 'internados_uci'] 1. Make a Box plot of "['confirmados_novos', 'internados', 'internados_uci']" 1. Make a evolution plot of confirmados_novos with moving average 1. Make a Widget version with selection dates and combo box 1. Make a summary conclusion

2.0.1 from COVID API import data using funcions and requests

2.0.2 Convert ['confirmados_novos', 'internados', 'internados_uci'] to pandas

```
if result.status_code==200:
    covdid=result.json()
else:
   print('Error fetching data')
#conversão do dados num dataframe
data_pack = ['confirmados_novos', 'internados', 'internados_uci']
datas = result.json()['data'].values()
dict_ = {}
for el in data_pack:
   dict_[el] =result.json()[(el)].values()
   df = pd.DataFrame(dict_ , datas)
   df.index=pd.to_datetime(df.index,format='%d-%m-%Y')
   df['avg_confirmados_novos'] = round(df['confirmados_novos'].
→rolling(window=3).mean(),2)
#Print tabela de casos covid entre datas
df
```

Introduza a data inicial a pesquisar(formato dd-mm-yyyy? 15-03-2020 Introduza a data final a pesquisar(formato dd-mm-yyyy? 15-08-2021
